Members of the Control
Organs

Oskar Panenka

(See para. 2b).

50X1-HUM

4. The Foldi Steel Works plant in Kladno (N51/L59) employs about 6,000 workers. The morale of the workers is low, largely because of irregularities in pay. About a year ago there was a strike in the rolling mills. There is actually a shortage of workers and Slovaks and Gypsies are being employed. Factory militia numbers about 200 men plus about 30 motor patrols. The militia is armed with rifles and sub-machine guns. The factory is surrounded partly by a fence, partly by a wall. On the northeast side it is not enclosed and is easily accessible.
5. Leading personnel in the plant is constantly changing. Recently the Foldi Works and Konev (Praha Iron Works) in Kladno were combined under General Manager Ing. Hlavacek. Other leading personnel include:
- Chief of Production controls Ing. Vala
 Chief of the steel shops Ing. Dr. Stefec
 Chief of the rolling mills Ing. Parma
 Control manager Suchopasek, the inventor of a dry valve filled with an acid for use on airplane engines.

50X1-HUM

Chief of the maintenance
 of the water towers

Ing. Makarius

Chairman of the Works Council

Kacha

50X1-HUM

Chairman of the ROH Poldi

Sommer

6. Production in the rolling mills, forges and steel shops is carried on in three shifts; work in the machine shops is done partly in two and partly in a single shift. During the war the plant produced 120,000 tons of raw steel per year. The present capacity of the plant is 100,000 tons of raw steel per year from which about 60,000 tons of finished products can be obtained. Raw material is delivered to the factory on its own rail line. Scrap iron is supplied mainly by the Eastern Zone of Germany under contracts arranged by a certain Polivka in Berlin. 50X1-HUM

Accounts are paid on arrival of the scrap in Magdeburg. Most of the scrap contains a high percentage of chromium and nickel alloys which are harmful to the furnaces.

alloying admixtures available from 50X1-HUM
 the USSR contains large quantities of carbon. 50X1-HUM

7. Research laboratories attached to the plant are located on the ground floor of the administration building. These laboratories are part of the State Technical and Research Institute. They are under the direction of Ing. Dr. Dobry, but negotiations are under way by which Dobry would be replaced by Ing. Stepec, the only prominent expert at Poldi 50X1-HUM
